

Summer

Who's wishing to go back to summer just as much as we are? ☀️

We know, we know – we can't JUST skip to summer, but there is one thing we can do, and that's prepare your skin for summer!

The sun is strong in the summer, so now is a good time to commit to products that protect and moisturise the skin. 😊

Excessive summer heat can easily dehydrate it. If your skin becomes oily in the summer, it may be a sign of dehydration.

Your body will step up the production of sebum, an oily substance, to protect itself from drying out. Which is great, but...

With our plant-based moisturising hand sanitizer containing natural chitosan, you won't need to worry about that anymore!

The sebum-like property of chitosan particles means that your hands will stay moisturised – and clean – all summer long. 🍦

Alexa, skip to summer after all?

Moisturising

Keeping hands clean is very important for avoiding sickness and spreading germs to others...

But what about keeping hands moisturised? 🙄

It's about more than keeping the skin hydrated and less prone to water loss (and looking great as a result!)

A side effect of frequent hand washing or sanitising is dry skin that can flake, itch, crack and even bleed, say dermatologists.

This actually makes people more susceptible to germs. 😞

Moisturising, however, reduces microbial shedding from the skin and protects you from picking up bacteria and viruses.

Fortunately, there are simple precautions you can take to avoid dry hands – including using our plant-based moisturising hand sanitiser.

Have you tried it yet? 🌱

Sundays

Here at Babington, reading the newspapers over a cup of coffee is our usual Sunday ritual. ☕

(Ok, we may have switched to the digital newsstand in recent years, but that doesn't change anything.)

Sundays are to relax and spend some quality time with ourselves or our families and friends.

There's nothing like a day to rest and re-energise for the week ahead, when we need to be at our best. 🔥

But not on Sundays. On Sunday we can just... be! How do you like to spend your Sundays?

Are you the adventurous type or the "can I have another cuppa tea?" type?

Let us know in the comments. 😊

Keeping Hands Sanitised

Dry hands? 😞 You now what they say...

If you have dry skin from using too much hand sanitiser, then simply apply moisturiser immediately after your hand sanitiser dries.

Hand-washing or sanitising helps prevent illness, but doing it too frequently leads to excessively drying the skin, which leads to dry, chapped, sensitive skin that invites germs and other bacteria in... 👁️👁️

So you need to heal it quickly!

But what if, instead of always having to apply a hand cream or ointment after you wash or sanitise your hands, you tried our plant-based, moisturising hand sanitiser, which leaves your hands soft AND clean? 🌱

Want to know how?

The unique @babingtonsoap moisturising hand sanitiser forms a healing barrier that counteracts the harsh effects of alcohol through the use of Chitosan – a natural ingredient – all while killing 99.9% of bacteria.

If you're ready to try it out, head to our website to order! 😊
